STRATEGIC AIRPORT MASTER PLANNING STUDY

FOR MIAMI-DADE COUNTY'S SYSTEM OF AIRPORTS

MIA Cargo Facilities and Needs Workshop
June 29th, 2011

MIAMI-DADE AVIATION DEPARTMENT

1. Prior Studies
2. Current MIA Capital Improvement Program (CIP)
3. SMP Goals and Objectives
4. SMP Study Approach

SMP Background – Prior Studies

STRATEGIC AIRPORT MASTER PLANNING STUDY

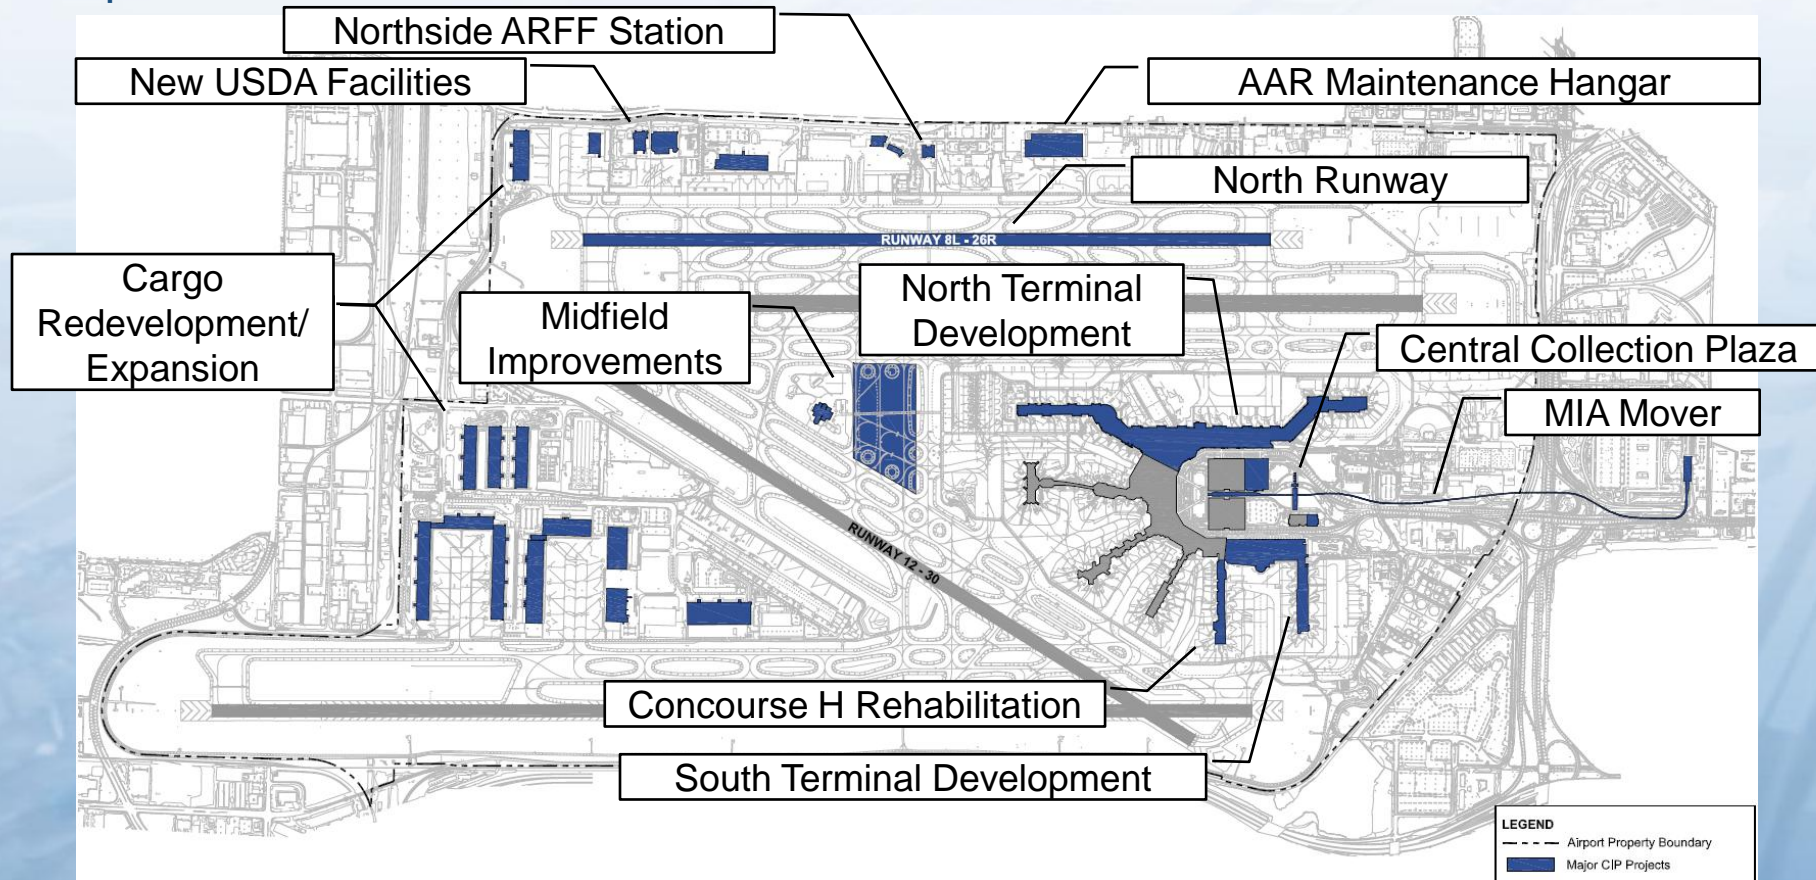

The current Master Plan for MIA recommended several of the projects included in the ongoing CIP. The Master Plan was initiated in 1991 and adopted in 1994. It focused on airport needs for the 1990-2010 timeframe.

An Aviation System Plan Update was commissioned in 1996 but never adopted.

A Strategic Terminal Planning Study was requested by the BCC. The Study was initiated in 1995 and completed in 1997. It focused on airfield and terminal development strategies for the 2010-2040 timeframe.

Capital Investments:

SMP Goals and Objectives

STRATEGIC AIRPORT MASTER PLANNING STUDY

- Strategic plan for MIA and the County's system of GA airports:
 - Outlines long-term capital investment strategies
 - Planning horizon: 2015 through 2050
 - Considers multiple development scenarios
- Comprehensive evaluation of aviation facilities:
 - Airfield
 - Terminals
 - Vehicular parking & roadways
 - Tenant facilities (cargo, aircraft maintenance, etc.)
 - Support facilities (airport administration, fueling, fire rescue, etc.)

SMP Study Approach

STRATEGIC AIRPORT MASTER PLANNING STUDY

PHASE 1

MIA Master Plan:

Stakeholder Surveys
Baseline Forecasting
Analysis
Inventory/Data
Collection
Identification of
Immediate Needs

PHASE 2

MIA Master Plan:

Capacity Assessments
Airfield, Terminal and
Landside Simulation
Modeling

PHASE 3 - Ongoing

MIA Master Plan:

2035 Facility Requirements
Market Assessment
Demand Scenario Analysis

General Aviation Airports:

Inventory, Forecasts and
Demand/Capacity
Assessments

Initiation of Long-Range Strategic Plan:

Initial Airport Asset
Optimization Analysis

PHASE 4

Long Range Strategic Plan:

Demand Allocations
Strategies
Long-Range Airport Concept
Plans

Implementation Planning:

CIP Programming
Preliminary Plan of Finance
Airport Layout Plans Set
Environmental Screening;
Preliminary Financial
Feasibility Screening

SMP Cargo Planning Initiatives

STRATEGIC AIRPORT MASTER PLANNING STUDY

- Review industry planning metrics and define demand/capacity parameters.
- Assess existing facilities utilization rates.
- Compare projected demand to existing capacity and gauge potential facility shortfalls.
- Define short- and long-term facility needs.
- Evaluate potential development alternatives.

- Present the MIA Strategic Airport Master Plan and Cargo Forecasts
- Review Facilities Limitations With Cargo Tenants
- Evaluate Future Cargo Facilities Needs
- Prioritize Improvements

2010 was a year of recovery!

Top 20 comprises 9 integrator hubs & regional hubs (*)

- FedEx global hub & 3 regional hubs (MEM, IND, EWR, OAK);
- UPS global hub & 3 regional hubs (SDF, DFW, PHL, ONT);
- DHL's US hub (CVG);
- ANC transpacific tech-stop (**)
- 4 dominant international gateways: MIA, LAX, ORD & JFK

Institutional Air Cargo Forecasts

STRATEGIC AIRPORT MASTER PLANNING STUDY

- Slowest growing major segment will be Intra-North America (NA)
- All segments exceeding world average touch Asia
- Global air cargo industry engine will be Asia, particularly China
- Asia-North America gateways will remain dominant but MIA will be supported by Asia's trade with Latin America

	<u>Boeing</u>	<u>Airbus</u>
	2008-2027	2009-2028
Intra-NA	2.70%	1.70%
NA-Asia	6.70%	3.40%
Asia-NA	6.60%	4.30%
NA-China	7.70%	8.20%
China-NA	9.20%	8.80%
NA-Europe	4.90%	3.00%
Europe-NA	5.40%	3.00%
NA-South America	6.00%	4.40%
South America-NA	5.70%	2.40%

MIA Air Cargo Forecasts Overview

STRATEGIC AIRPORT MASTER PLANNING STUDY

Cargo forecasts are composites of international and domestic components

- Domestic and international mail are included
- Mail diminishing contribution sold as “Space Available”
- Domestic segments of international shipments represents 45% of domestic freight
 - 33% of integrators’
 - 80% of belly carriers’
- Integrators’ share of domestic freight is 76%
- International composites are derived from MIA-specific weighted multipliers for each major trade lane
- Adjustments for each case (low, base and high) are based on mid- to long-term resilience expectations

MIA Air Cargo Forecasts Overview

STRATEGIC AIRPORT MASTER PLANNING STUDY

Input from carriers and forwarders

- Growth between MIA and Latin America generally exceeds projections
- More than half of exports to Latin America over MIA are of Asian origin
- Northbound volumes from Latin America also get a premium, but to a lesser extent. Imports over MIA are mostly intended for the North American market.
- Expansion of Asian carriers at MIA will have ripple effects on the cargo composition.

The high share transported on freighters should be a competitive advantage for MIA

- Some gateways are more dependent on belly cargo, which is subject to recent and near-term screening requirements.

SMP Baseline Forecast Annual Air Cargo Tonnage

STRATEGIC AIRPORT MASTER PLANNING STUDY

Alternative Cargo Forecast Scenarios

Most likely positive scenario would be exceptional growth from more Asian carriers using MIA as a gateway for Latin America.

- Far East growth (High Case) is already forecasted relatively high (7.5% enplaned & 8.5% deplaned) but using straight-line rates from a small base. The near-term introduction of additional scheduled freighters would increase that volume.
- This growth would have positive ripple effects on other forecasted elements: More than half of southbound freight to Latin America from MIA is believed to be Asian origin. Much of this is trucked from the US West Coast. Consequently, there will be both inbound (from Asia) & outbound positive impacts on tonnage.
- The availability of additional outbound capacity to Asia would also serve as a stimulus for exports from both Latin America and the Southeastern US.

Deriving Flight Operations from Tonnages

STRATEGIC AIRPORT MASTER PLANNING STUDY

- Preserve separation of domestic (13% of total) & international (87%) volumes.
 - Distinctions in forecasted growth rates & market shares carried by freighters.
 - Distinctions in payloads of primary aircraft used on domestic vs. international.
- Marginal growth/loss forecasted in 5-year increments.
- Convert tonnage into average daily rate (annual/312 work days).
- Anticipated belly cargo is deducted from forecasted tonnage: (-20% for domestic & -15% for international)
- Directional imbalances (inbound versus outbound) are typical of international gateways. Total cargo is divided by 60/40 to project need for additional operations based on both near and long-term unlikelihood that import tonnage will be equal to export tonnage.

Existing Facilities – Cargo Buildings

STRATEGIC AIRPORT MASTER PLANNING STUDY

SPECIAL HANDLING AREAS:

- Climate controlled areas for perishable products: Approximately 300,000 square feet in Buildings 700, 701, 702, 706, 708, 710, 711, 712, 714, 716, 805.
- Express, mail, and courier services area: Approximately 320,000 square feet in Buildings 716, 805, 807, 820, 831 and 844.*
- Animal handling areas are located within Building 815, which is operated by the U.S.D.A. There is also an animal quarantine area within the Cargo Clearance Center.
- Fumigation Facilities: Approximately 10,000 square feet in Building 817. A temporary facility has been established in a vacant parking lot located to the immediate east of Building 704.

* Includes DHL Express, UPS, IBC Airways and FedEx.

CONSTRAINTS AND ISSUES:

- Cargo warehouses with airside access are currently at full capacity.*
- Cargo operators currently use landside staging areas that are not within their leaseholds.
- Lack of staging areas and/or inefficient GSE storage results in the staging of support equipment, tractor trailers, and etc. in pervious and non-delineated areas.

* Based on discussions with MDAD, all available space within Building 716 will be leased in 2011.

GROUP SESSION 1

CARGO FACILITIES LIMITATIONS

Cargo Facilities Limitations

STRATEGIC AIRPORT MASTER PLANNING STUDY

WAREHOUSES

- Condition & capacity.
- How much off-airport cargo processing is driven by capacity?

RAMP

- Suitability for existing fleet & frequencies, peak conditions
- How much are current operations being constrained by existing airside capacity?

LANDSIDE (PARKING & ROADWAYS)

- Terminal landside parking & marshalling areas
- How much would on-airport common use truck trailer parking & truck marshalling alleviate?

ALLIED SERVICES

- Refrigeration, fumigation & inspection.

BREAK

GROUP SESSION 2

LONG-TERM CARGO PRIORITIES

Long-Term Cargo Priorities

STRATEGIC AIRPORT MASTER PLANNING STUDY

WAREHOUSES

- Capacity increases versus optimization.
- How will dwell-times be affected?

RAMP

- Future fleet: North America, Transpacific, Latin America, Transatlantic
- What is the vulnerability of MIA to diversions to other US gateways?

LANDSIDE (PARKING & ROADWAYS)

- How much will future growth be truck-to-plane versus plane-to-plane?

ALLIED SERVICES

- Growth in individual operations versus third-party, common use

MIA versus other alternative gateways

STRATEGIC AIRPORT MASTER PLANNING STUDY

Airport Operating Costs

Cargo Facilities Quality & Availability

Airfield Capabilities

Airline Connectivity

Freight Forwarder Presence
